Dear Valued Customer,

Hello, and thank you for your recent request for information regarding diversifying your retirement savings with physical gold and silver.

You're probably just as concerned as we are for America's economic future. For the first time in our proud nation's history, we're facing a future where our standard of living will decline compared to those who came before us. Our two-decade-plus national binge of deficit spending and multiple bubble-and-bust cycles of the stock market has created a financial dilemma for Americans who hope, one day, to stop working and enjoy their golden years.

The U.S. faces an absolute ocean of red ink, over \$30 trillion (and counting). That's money owed to global central banks, U.S. citizens, and future recipients of Social Security, just to name a few. We've seen the federal government bailout banks owned by other nations. We've seen the Federal Reserve conjure trillions of brand-new dollars out of thin air, nearly overnight! It's only a matter of time before the entire house of cards comes tumbling down before our government becomes financially bankrupt, dooming all our futures, and our children's futures as well.

We have a window of opportunity right now. To diversify our hard-earned money out of the inflated, increasingly-worthless U.S. dollar. To turn those pieces of paper, backed by nothing but hot air and vague promises to pay with real, physical assets we can hold in our hands.

My colleagues and I at American Alternative Assets have been working hard to educate everyday Americans just like you about the crucial importance of acquiring physical precious metals due to their intrinsic value. We want you to know the benefits of acquiring rare, highly-valued U.S. coins to diversify and protect your savings. I'm confident that, if you're given the facts, you will make the right decision. You will proudly join millions of your fellow Americans who own rare coins and precious metals.

Please take as much time as you need to review the enclosed materials. I know it's a lot to take in! And remember, at any time, my staff of professionals stands ready to make your experience enjoyable. We want to offer you the same level of white-glove service the world's billionaires get when they go shopping - while never losing sight of the critical protection that tangible items with intrinsic value can give your financial future.

If I can personally be of any additional service to you or your family, please give my office a call at 833 - 656 - 4653. You have my commitment that our organization will make every effort to serve your needs with integrity and honesty.

Sincerely,

CEO, American Alternative Assets

THE DIFFERENCE WE ARE MAKING

“Gold is money. Everything else is credit.”

_J.P. Morgan

The core of our company is directed at providing great opportunities for Americans to protect and diversify their retirement funds through physical precious metals. We provide valuable knowledge and every of our company’s decisions is tailored towards ensuring a smooth transition to your retirement plan.

Our Mission

Our mission is to provide the best service through value of integrity, support, and knowledge to empower customers in making financially prudent decisions to attain their desired financial future and protect their savings.

Our Values

We achieve this mission through values of hard work, customer centeredness, integrity, empathy, and efficiency. We support our customers through the whole process to enable them to understand all the available options for purchasing precious metals and guide them in choosing one that is best suited for their goals.

Our Vision

To establish a network of financially secured American retirees through sustainable ownership of physical assets.

HERE'S WHY WE ARE THE BEST

American Alternative Assets stands as the best in industry as we offer a time-proven track record of success in our service provision. We have a profile that projects values of integrity, empathy, and hard work dedicated to helping customers meet their needs.

Simplicity

Our process is simple, easy to understand, and execute. Our customers trust us to make their retirement plans straightforward; hassle-free.

Transparency

We understand the value of integrity and pride ourselves in being open with our customers. We build and sustain trust through an entirely transparent process. From the point of contact to the delivery of your metals, you can count on our fair and trustworthy service.

Reliability

You can count on us to help you make the best choices. Through every step of the process, from lower prices to insured delivery we are always client-oriented. We have a track record of reliable customer service, something you can count on when safeguarding your future.

The benefits of choosing us are innumerable. We have set a standard in the industry that remains to be matched.

Our mission, vision, and values drive us to give customers the best value when making their retirement plans. Our service aims to establish trust- and to do it in the most honorable manner.

THE QUIET CONSENSUS

By the time most investors noticed, it was already happening.

In October 2024, billionaire Paul Tudor Jones went on CNBC: 'I'm long gold. All roads lead to inflation.' Jeffrey Gundlach predicted gold would hit \$4,000.

They were both right. By October 2025, gold had soared to \$4,381, the highest price in human history.

Now it's November 2025. Gold is consolidating around \$4,000. And the billionaires haven't changed their minds. In fact, they're doubling down.

The question isn't whether gold will continue higher. Wall Street banks are projecting \$5,000+ by the end of 2026. The question is: Will you position yourself before the next leg up?

Then there's Ray Dalio, founder of the world's largest hedge fund. His position has been consistent for years: 15% portfolio allocation to gold. His reasoning? "Gold is the only asset that somebody can hold and you don't have to depend on somebody else to pay you money for."

When billionaire investors who rarely agree on anything start making nearly identical recommendations, you should pay attention.

But here's what's really interesting: It's not just the billionaires.

And most telling of all: A 72-year-old investor who correctly navigated the last three gold bull markets just went on record with a \$10,000-\$12,000 gold forecast over the next decade.

This is institutional reality backed by hundreds of billions of dollars in actual positioning.

Yet 99% of Americans have no idea this consensus even exists.

WALL STREET'S SECRET FORECASTS

Four major Wall Street banks are projecting gold will hit \$5,000 by the end of 2026:

Goldman Sachs: \$4,900 by Q4 2026

JP Morgan Private Bank: \$5,200-\$5,300 by Q4 2026

Bank of America: \$5,000 by 2026

UBS: \$4,200 by 2026

These aren't pie-in-the-sky predictions. These are the same banks that told you gold would never break \$2,000... then \$3,000... then \$4,000.

They've been wrong at every step. Too conservative. Now they're saying \$5,000 within 13 months

But why are they all forecasting these numbers? What do they see that most investors don't?

The answer lies in data JP Morgan published in an internal research note that received almost no media coverage.

Want to Understand How These Forecasts Apply to Your Retirement?

- ✓ Wall Street's gold forecasts they represent a 69% potential gain from current prices. But how does that translate to actual protection for your specific retirement situation?
- ✓ A precious metals specialist can walk you through exactly what a move to these price targets would mean for your portfolio, and more importantly, how to position yourself before happens.

Call (833) 656 - GOLD right now to talk with a precious metals IRA specialist and discover how to protect your retirement.

THE NUMBER THAT **CHANGES EVERYTHING**

JP Morgan's precious metals team discovered something remarkable when they analyzed portfolio allocation data:

Current precious metals allocation in US portfolios: 0.5%

40-year historical average: 2.0%

Half of one percent. That's how much of Americans' total savings and investment assets are currently in precious metals, gold, silver, everything combined.

When an asset class falls below its historical average, money eventually flows back until the average is restored.

So what happens when precious metals revert from 0.5% back to the 40-year mean of 2.0%?

That's a 4X increase in demand from US investors alone.

Let's do the math. Americans collectively hold about \$141 trillion in investable assets.

Moving from 0.5% to 2.0% means an additional \$2.1 trillion flowing into precious metals.

For context, total global annual gold mine production is worth about \$350 billion at current prices.

A single year of catch-up buying would exceed six years of global mine production.

And we're not even talking about global reversion to mean, just the United States.

Worldwide, the picture is similar: current allocation is 1.0% versus a historical average of 2.0%, suggesting global demand could double.

But here's the most important fact in this entire report: US retail investors only started participating in this gold bull market 20 weeks ago.

Join the 4X Demand Surge Before It Happens

Central banks aren't waiting. Wall Street isn't waiting. Will you?

CALL (833) 656-GOLD NOW

Talk with a precious metals IRA specialist and learn how to rollover existing retirement funds into gold without triggering taxes or penalties. Get positioned before the masses figure out what the smart money already knows.

YOU'RE NOT LATE. YOU'RE EARLY

Look at where we are right now in November 2025 at the time of this writing.

Gold spent October hitting all-time highs near \$4,381. Then it pulled back 7% to around \$4,000-\$4,100.

Most investors see a pullback and think, 'I missed it.'

But look at what's actually happening: The pullback brought gold from extreme overbought conditions back to sustainable technical levels. Support is holding at \$3,900. The 50-day moving average is rising.

And Wall Street banks just raised their 2026 targets AFTER the pullback

ETF flows, the primary way American investors buy gold, showed minimal participation through most of 2023 and early 2024. The gold price was rising, but Americans weren't buying.

Who was buying? Central banks. Asian investors. European institutions. Sovereign wealth funds. Everyone except American retail investors.

Rick Rule explained the timing clearly: 'Retail flows into gold as measured by inflows into the gold-oriented ETFs really began in mid-2024 nearly a full year after the major move started.'

Think about what that means. Gold went from \$1,850 in October 2023 to over \$4,300 by October 2025. That's a 132% gain.

American retail investors missed the first year of that move. They sat on the sidelines while Asian central banks, sovereign wealth funds, and European institutions accumulated at \$2,000, \$2,500, \$3,000.

The good news? Even after that massive run, retail participation is STILL only getting started.

You're not late. You're early. The masses haven't arrived yet.

THE 1975 PLAYBOOK

Rick Rule remembers 1975 vividly. He was 22 years old, just starting his investment career, watching the Federal Reserve make a decision that would change gold's trajectory for the next decade.

Gold had been rising since Nixon ended the gold standard in 1971, climbing from \$35 to \$200 by early 1975.

Then the Fed decided to fight inflation by raising interest rates. Gold crashed from \$200 to \$100, a 50% decline in just nine months.

Most investors gave up. They sold at a loss. They thought the bull market was over.

Most investors gave up. They sold at a loss. They thought the bull market was over.

They were catastrophically wrong.

Rule explains what happened next: "Congress and the Fed lost their nerve at the end of 1975 and cut the interest rate despite persistent inflation. And that was the game on signal."

The result? Gold went from \$100 to \$850 in just 5.5 years, an 850% gain from the point where everyone thought it was dead.

Now let's talk about today. Inflation surged to 9.1% in June 2022. The Fed raised rates from 0% to 5.5% in just 18 months, the fastest hiking cycle since the 1980s.

Higher rates crushed everything except gold, which quietly broke to new all-time highs.

Now there's enormous political pressure to cut rates. The economy is slowing. Commercial real estate is struggling. The federal government is paying over \$1 trillion annually just in interest on the debt.

But real inflation, the kind you experience at the grocery store and gas pump, hasn't gone away.

Official CPI might claim 2.5%, but Rule explains the truth:

"If you look at the basket of goods and services necessary for the maintenance of your family, which certainly include tax, food, and fuel, you will see that the rate of inflation is nothing like 2.5%. It's more like 7.5% or 8%."

Do you see the parallel?

1975: Fed raises rates → Economy weakens → Fed cuts despite inflation → Gold explodes

2025: Fed raises rates → Economy weakens → Fed cuts despite inflation → ???

We're at the exact same crossroads as 1975. And unlike investors back then, you now have the benefit of knowing how this story ends.

Don't Miss the \$100 to \$850 Moment Again

In 1975, those who waited missed buying gold at \$100. They paid \$300, \$400, or more on the way up. History is repeating, but this time, you have fair warning.

CALL (833) 656-GOLD NOW

Speak with a precious metals IRA specialist and discover how to protect your retirement before the Fed's rate cut triggers the next explosive move. No obligation. Just answers to your specific questions

THE CENTRAL BANK SIGNAL

While American investors were distracted by meme stocks and crypto, something historic was happening in the background.

While American investors were distracted by meme stocks and crypto, something historic was happening in the background.

Central banks worldwide were buying gold at a pace not seen since 1967, before Nixon ended the gold standard.

- **2022:** 1,082 tonnes (record high)
- **2023:** Over \$5 trillion created during pandemic response
- **2024:** 1,044.6 tonnes (third consecutive year above 1,000 tonnes)

Through the first nine months of 2025, central banks have purchased 634 tonnes on pace for another 850+ tonne year.

That's **FOUR** consecutive years above 1,000 tonnes. This isn't a temporary trend. This is a permanent shift in how nations manage reserves.

To put this in perspective, during 2010-2019, central banks averaged about 450 tonnes annually. In three years, they've more than doubled that rate.

Central banks don't do anything random. These institutions plan in decades, not quarters. So why the sudden urgency?

Rule explains: "The US has basically forced the Chinese central bank and other central banks to buy gold by weaponizing the US dollar."

He's referring to 2022, when the US froze \$300 billion of Russian reserves after the Ukraine invasion. Think about what that meant to every other central banker in the world.

If you run a central bank in China, India, Brazil, Saudi Arabia, or any country that might someday run afoul of US foreign policy, you just watched the US government effectively confiscate another sovereign nation's assets.

Your immediate thought: "If they can do it to Russia, they can do it to us. We need assets they can't freeze. We need gold."

China added 225 tonnes in 2023 alone, 17 consecutive months of purchases.

Turkey added 229 tonnes. India added 112 tonnes. These aren't small, unstable countries. This is the world's second-largest economy, a major NATO ally, and the world's largest democracy.

These are sophisticated, strategic actors with access to the best financial intelligence in the world. And they're all buying gold aggressively.

Central bank buying creates a permanent bid under the gold price.

Unlike retail investors who panic sell, central banks are patient strategic buyers. When gold corrects, they step in. This creates a floor.

That structural shift in demand is one reason Wall Street banks confidently project \$5,000 gold. They know central banks will keep buying at those prices and probably higher.

THE \$10,000 QUESTION

Now let's address the elephant in the room: Can gold really reach \$10,000?

Rick Rule, at 72 years old with 50 years of investment experience, recently made this statement in an interview:

"I believe that the purchasing power of the US dollar will decline over the next 10 years by 75%. And I think that the gold price in nominal terms will increase commensurate with that decrease in purchasing power. If you use \$3,000 as a base, that suggests a number like \$10,000 or \$12,000 nominal US dollars 10 years out."

Let me emphasize: Rule isn't a promoter. He's independently wealthy and approaching the end of his career. He has no reason to exaggerate. And he's calling for \$10,000-\$12,000 gold within a decade.

But this comes with a caveat. A lot of people have a vision in their mind of what \$10,000 will buy.

It is less about the value of gold going up, and more about the value of the dollar going down.

Gold could hit \$10,000 an ounce because of an increasingly weak dollar that shows no signs of strengthening.

And here's what makes Rule's forecast credible: Wall Street banks are already forecasting \$5,000 by 2026. That gets you halfway to Rule's \$10,000 target with eight years still remaining.

Is \$10,000 guaranteed? Of course not. But given:

- The \$38 trillion in US debt at the time of this writing (adding \$1 trillion every 5 months)
- The Fed's balance sheet still at \$6.9 trillion (up from \$882 billion in 2008)
- Central banks buying 1,000+ tonnes annually
- The 4X demand increase yet to come
- We're only in Phase 2 of a three-phase bull market

...Rule's forecast looks increasingly plausible.

CHAPTER 8: BRETTON WOODS 2.0: THE DELIBERATE REVALUATION

When Government Revalues Gold to Pay Its Debts

Everything we've discussed so far assumes gold rises naturally through market forces, central bank buying, investor demand, currency devaluation.

But what if the government deliberately revalues gold as official policy?

That's not speculation. That's the forecast from Dr. James Thorne, PhD in Economics and Chief Market Strategist at Wellington Altus Private Wealth, one of Canada's largest wealth management firms.

In a November 2025 interview with Kitco News, Thorne made a stunning prediction that changes the entire gold thesis: **"We are writing Bretton Woods 2.0, and gold will be a key contributor."**

THE FISCAL RUBICON

Thorne points to a specific historical marker that signals "the end of the empire":

Interest payments on US debt now exceed military spending.

"That is typically the Rubicon," Thorne stated. "When you cross that, it signifies the end of the empire. We're at this point where the system has to be recalibrated."

Think about what that means. The United States, the world's sole superpower, now spends more money just paying interest on its debt than it spends on its entire military. Defense spending in 2024 was \$820 billion. Interest payments exceeded \$1.16 trillion.

That ratio has only happened a handful of times in history, and each time it marked the beginning of the end for that empire's dominance.

THE DELIBERATE SOLUTION

Here's where Thorne's analysis departs from conventional wisdom.

Most analysts assume gold rises because the dollar falls. Market forces. Supply and demand. Natural consequences of poor monetary policy.

Thorne argues something different: **The government will deliberately write up the value of gold on its balance sheet to pay down sovereign debt.**

"Why wouldn't they write up the assets?" Thorne asked. "Why shouldn't they write up the assets and use that to basically pay down the debt? People are going to recognize the fact that we are writing Bretton Woods 2.0."

Let's put this in perspective. The US government officially values its gold reserves at \$42.22 per ounce, the price set in 1973. But the US holds 8,133 tonnes of gold. At \$42.22 per ounce, that's worth about \$11 billion.

Let's do the math on America's gold.

The US government owns 8,133 tonnes of gold. On their official books, they value it at \$42.22 per ounce. That's the 1973 price they never changed.

At that old price, America's gold is worth just \$11 billion.

But gold trades for **\$4,077 per ounce today** (November 2025).

At today's real price? That same gold is worth **\$1.066 trillion**.

Now here's where it gets interesting.

What if the government officially "writes up" gold to \$10,000 per ounce? Not as a market prediction, but as a policy decision to fix the balance sheet?

At \$10,000 per ounce, America's gold reserves jump to **\$2.6 trillion**.

Think about that. The US national debt just hit \$38 trillion this month. It's growing by nearly \$6 billion per day.

A single gold revaluation could knock off \$2.6 trillion of that debt problem. No tax increases. No spending cuts. Just updating the value of an asset we already own.

But here's the question for you: What happens to your gold when the government does this?

If you own physical gold before they revalue it, your gold goes up with theirs.

LOST TRUST IN THE SYSTEM

Thorne's core thesis aligns perfectly with what we've discussed throughout this report:

"People are fed up with the fiat currency. That's why gold is going."

The public has lost trust in the monetary system. They've watched:

- Money printing on an unprecedented scale
- Inflation eroding purchasing power
- Debt spiraling completely out of control
- Promises that "everything is fine" proven false repeatedly

Thorne argues this loss of trust is permanent and accelerating. Gold isn't rising because of technical factors or temporary inflation. It's rising because the entire fiat currency system is being recalibrated in real-time.

PRICE TARGETS AND TIMING

Thorne's specific forecasts corroborate everything we've seen from other experts:

Short-term: \$5,000

End of decade: \$8,000

Notice how this aligns with:

- Wall Street's \$4,000-\$5,000 by 2026
- Rick Rule's \$10,000-\$12,000 by 2035
- Central bank behavior (buying at current prices, not waiting)

WHAT BRETTON WOODS 2.0 ACTUALLY MEANS

Thorne's specific forecasts corroborate everything we've seen from other experts:

The original Bretton Woods Agreement (1944) established the US dollar as the world's reserve currency backed by gold at \$35 per ounce. That system lasted until Nixon ended gold convertibility in 1971.

For 50+ years, we've lived in a pure fiat system with no gold backing. That experiment is now failing under the weight of unpayable debts.

Bretton Woods 2.0, as Thorne describes it, wouldn't be a return to the gold standard. It would be a deliberate revaluation of gold to recalibrate government balance sheets and establish a new baseline for the monetary system.

Countries would still use fiat currencies for daily transactions.

But gold would play an official role again, not as money people use, but as the asset that backs sovereign balance sheets and provides legitimacy to otherwise worthless paper.

This is why central banks have been buying 1,000+ tonnes annually for three years. They're positioning ahead of the official revaluation. They want to hold as much gold as possible before the "write up" happens.

THE "LOST DECADE" WARNING

Thorne isn't blindly bullish on everything. He warns that the current supercycle could end in a crash followed by a "lost decade" for stock investors.

His forecast: The S&P 500 might peak at 15,000 in 2031, then not reach that level again until 2041.

A decade of zero returns in stocks.

But gold? Thorne believes it will be "the go-to trade" throughout that entire period. While stocks churn sideways for ten years, gold would be performing its historical role, preserving wealth during periods of monetary chaos.

This is exactly what happened in the 1970s. Stocks went nowhere for the entire decade (the Dow ended the 1970s at virtually the same level it started). But gold went from \$35 to \$850.

WHY THIS CHANGES EVERYTHING

If gold were simply rising due to inflation or market forces, you could argue the move might reverse if inflation comes down or the Fed gets more hawkish.

But if Thorne is right, if we're deliberately writing Bretton Woods 2.0 and gold is being positioned as the asset that recalibrates sovereign balance sheets, then the move to \$5,000, \$8,000, even \$10,000+ isn't a bubble that will pop.

It's a policy decision that's already been made behind closed doors.

CALL (833) 656-GOLD NOW

Speak with a precious metals IRA specialist and discover how to position your retirement for Bretton Woods 2.0 before the official revaluation happens. Learn how to rollover existing 401(k) or IRA funds without triggering taxes or penalties.

YOUR NEXT STEP: TALK TO A SPECIALIST

Everything we've discussed leads to one important question: How do you actually position yourself for what's coming?

For most Americans ages 65-75, the bulk of your wealth sits in traditional retirement accounts. 401(k)s, IRAs, and other qualified plans.

The good news: You don't need to liquidate those accounts or trigger massive tax consequences to add gold protection.

There's a specific IRS-approved structure designed exactly for this purpose: the Precious Metals IRA.

HOW IT WORKS

A Precious Metals IRA is simply a self-directed retirement account that holds physical gold and silver instead of paper assets. It maintains all the same tax advantages as your current IRA, tax-deferred or tax-free growth, same contribution limits, same RMD requirements.

The only difference: Instead of holding mutual funds that lost 40% in 2008, your IRA holds physical precious metals that gained value during that crisis.

Here's what most people don't realize: **You can move money from existing retirement accounts into a Precious Metals IRA without triggering taxes or penalties.**

This works through what's called a "rollover" or "transfer":

401(k) Rollover

Move old employer 401(k) funds into a Precious Metals IRA (no taxes)

IRA Transfer

Transfer a portion of your current IRA into precious metals (no taxes)

Partial Transfers

You don't have to move everything—most people start with 10-20%

The critical detail: This must be done as a direct transfer between custodians. If you try to do it yourself, you'll trigger taxes and penalties.

This is why talking to a precious metals specialist is essential. These specialists handle these transactions daily and coordinate everything, the custodian, the IRS-approved metals, the secure storage, all the paperwork.

BOOK YOUR FREE CONSULTATION

The billionaires have positioned themselves. The banks have forecasted. The central banks are buying 1,000+ tonnes annually.

The 4X demand increase hasn't happened yet. US retail participation only started 20 weeks ago. You're not late, you're early.

But the golden window won't stay open forever.

- How much of your retirement portfolio could be in precious metals based on your specific situation
- The exact process for rolling over 401(k) or IRA funds without taxes or penalties
- Which IRS-approved metals make sense for your goals
- How to position yourself for the potential move to \$8,000-\$10,000 gold Wall Street is forecasting

Call (833) 656 - GOLD now to find out how gold and precious metals could protect your retirement

There's no cost for the consultation. No obligation to move forward. Just a conversation with a specialist who handles these transactions daily and can answer your specific questions.
